OPES represents so much more than just another upgrade to your Patient Management software—it's a complete re-engineering of our previous system.

During the last 3 decades, we've integrated new ideas into hundreds of dental clinics across North America. We've witnessed a time of such incredible advances in technology. Did you know the "World Wide Web" turned 20 years old this week?

The last 10 years has seen us expand our expertise by applying the lessons learned with the introduction of our Consulting services. Side by side, we've had the privilege of working more closely with dental teams, re-evaluating out-dated systems, developing efficiencies and exploring "Best Practices". We've built a solid and experienced team with great credentials. Along the way, we've also had the unique experience of working closely with all the major dental systems in the market.

It became readily apparent that a better standard needed to be set for Dental Practice Management. At *Timeshift*, we've set our sights precisely on that: combining the systems and knowledge we've acquired over the years with the current technologies that makes getting things done easier while providing clearer feedback of your results. Software needs to be made smarter and that's what OPES will be all about.

While we've been at it for several years, like the "www", we've only just begun. Benefit from our vast experience and hang on for the future...make the *Timeshift!*

And remember, if you're on an annual maintenance contract, the upgrade comes to you at no additional software cost (the only fees are for data conversion and on-site training).

What does OPES mean, anyway??

OPES: def'n:

(pl.) means, wealth, abundance, riches, resources.
